Text Responses

Question: Improvement suggestions.

Change where we met to a place with more outlets, other than that the course was great.

I don't think this course needs that much improvement.

I cannot think of anything that would make this course more enjoyable or informative.

offer more effective ways to help students in need. Also, it could be helpful to briefly review the assigned lab during lab period to give students a better start to the lab.

Question: Other comments:

I was informed that computer science help would be available at the learning center on Wednesdays and when showing up twice, there was no one there to help me.

Question: Comments for professor

An enjoyable, hands-on class to look forward to. The professor really knows his stuff, is well organized, and is able to communicate the material efficiently. Just a difficult course for beginners and once you fall behind, it is hard to catch up.

I really enjoyed this course and plan on furthering my knowledge in Computer Science. Thanks!

I think Prof. Derbinsky is a great teacher. But, I believe that his system for turning in labs is unfair. If we submit a lab incorrectly with out our knowledge, you do not have a chance to resubmit the lab, you get an automatic zero. I think that since this was an issue that affected the majority of the students, he should reconsider the system.

Very good class, enjoyed it a lot and strongly considering taking more computer science courses in the future
